## Backup Storage

Redundancy:

- There is no additional charge for backup storage for up to 100% of your total provisioned server storage. Additional consumption of backup storage, i.e. geo-redundant storage (GRS), will be charged in GB/month. GRS requires twice the amount of storage capacity because it creates a replica. Price per GB remains the same.

## High Availability

High availability (HA) avoids database downtime by maintaining standby replicas of every node in a server group. If a node goes down, incoming connections are automatically switched from the failed node to its standby.

CURRENCY

United States – Dollar (\$ USD)

Prices are estimates only and are not intended as actual price quotes. Actual pricing may vary depending on the type of agreement entered with Microsoft, date of purchase, and the currency exchange rate. Prices are calculated based on US dollars and converted using London closing spot rates that are captured in the two business days prior to the last business day of the previous month end. If the two business days prior to the end of the month fall on a bank holiday in major markets, the rate setting day is generally the day immediately preceding the two business days. This rate applies to all transactions during the upcoming month. Sign in to the [Azure pricing calculator](#) to see pricing based on your current program/offer with Microsoft.
